DECKING
BALUSTRADES
2013/

GIVE YOUR SUMMER A UNIQUE FINISHING TOUCH WITH OUR STUNNING BALUSTRADES/

Cheshire Mouldings is the UK's leading manufacturer of outdoor balustrade components because we go further to give you the best possible finish, turning decking into a sensational seasonal living experience that lasts year after year. Only the finest quality timbers make it into our products, all from sustainable sources, and designed to give your decking a unique quality finish you'll be proud of now and for years to come.

CORE TURNED & CONTEMPORARY

We have the perfect solution for every style of decking. Whether you're looking for understated elegance or contemporary flair we have a portfolio that will compliment your environment and personal taste. From our **Core DEK** range, with traditional turned and stop chamfered designs bringing classical elegance to any decking feature, to our **Axxys DEK**, **Metal DEK**, **Clear DEK** and **Modern DEK** which are at the cutting edge of outdoor balustrade design with their use of toughened glass and cast metal details.

QUALITY THAT LASTS

At Cheshire Mouldings we take pride in the quality of our decking components, because we understand how important they are in creating the right finish and how that finish needs to be sustainable, year after year. That's why all our softwood balustrades come pre-treated with TANALITH E preservative to help protect your deck from the inside out. Other than pressure washing and resealing once or twice a season, all you have to do with your deck is literally sit back and enjoy it.

DECKING DONE THE RIGHT WAY

As members of the Timber Decking Association we understand just how important good design and use of the best materials is. Above all we understand that a good deck is a safe deck, which is why our systems are tested to BSBS6180:1999. Decks can also be substantial features in their own right and so our advice to homeowners and contractors alike is to always check with your local planning authority before you start your project.

TIMBER TREATMENT/

THE VERY BEST PROTECTION FOR YOUR DECKING TIMBERS/

The full range of softwood used for our decking products have been pressure treated within our own facilities with TANALITH E wood preservative. This latest generation, environmentally advanced formulation treatment provides a proven and superior long-term protection that will give you real confidence for your decking project. The resulting TANALISED E treated components are fully protected against all forms of wood decay and insect attack, giving a typical service life of 15 years and beyond.

The treated timber is initially pale green colouration, slowly weathering to a honey brown and to a silver grey. TANALISED E pressure treated timber does not need to be painted or stained to maintain the preservative protection, although a decorative coating can be added if desired.

WHAT IS TANALITH E?

TANALITH E is a unique, highly effective preservation protection system based on patented copper Triazole technology, developed by Arch, world leaders in timber protection technology. The copper is derived from recycled sources and is well known for its fungicidal and insecticidal properties. Combining copper with a dual triazole system broadens its spectrum of activity to give complete protection against all wood decay organisms. The triazoles used in TANALITH E are biodegradable and are commonly used to protect many of the food crops we eat.

PROVEN PERFORMANCE

TANALITH E wood preservative has now been used successfully in the UK for over 12 years and is the premium wood preservative in more than 35 countries worldwide. Not only does it meet the requirements of the industry standard BS8417, but its performance credentials exceed other world preservatives on the market. TANALITH E has been tested in more than 20 independent field sites around the world under a variety of conditions.

Our preservative treatments are strictly controlled by our own fully trained plant operators to ensure the correct level of protection for the timbers.

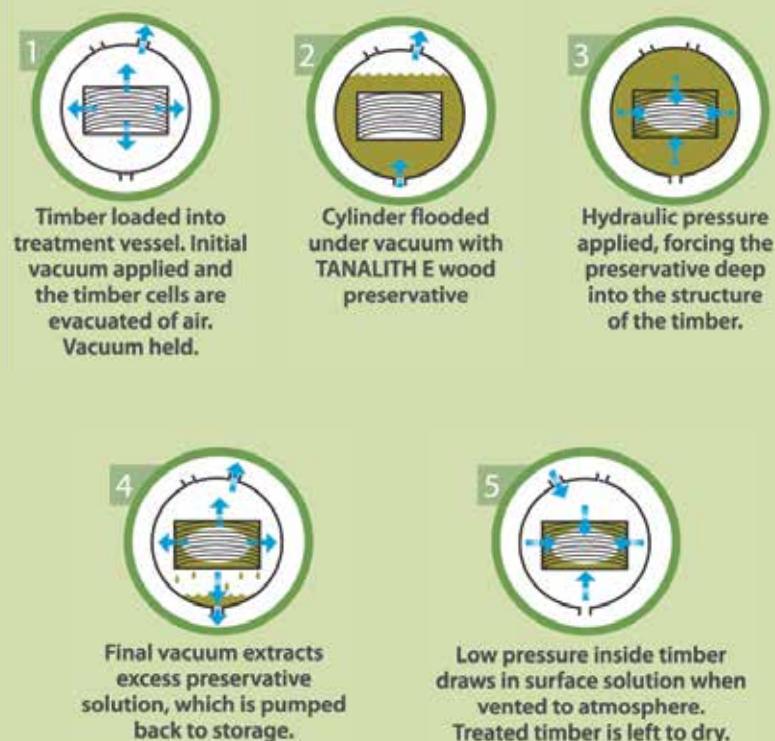

WORKING WITH TANALISED E PRESSURE TREATED TIMBER

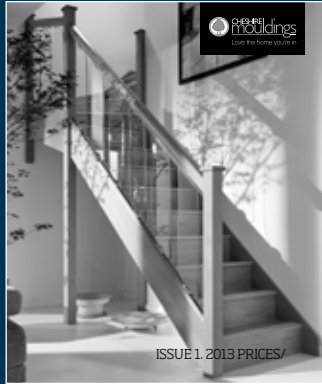

With the preservative fully impregnated into the wood, TANALISED E pressure treated timber is a safe and versatile construction material. The normal precautions that would be used with untreated timber should be employed - a detailed consumer information leaflet is available on request.

If any cutting, notching or drilling is made to the treated timber components, any exposed surfaces must be liberally swabbed with ENSELE end grain preservative to maintain the integrity of the treatment. ENSELE end grain preservative is available through Cheshire Mouldings.
